

GAMSKETTE G TRACKS

FOR EXCEPTIONAL GRIP

GAMSKETTE G TRACKS

FOR EXCEPTIONAL GRIP

The Gamskette G was developed to provide a stable and reliable connection between the snow groomer and the snow. It is specifically designed for slope preparation on steep terrain and a variety of snow conditions.

GRIP AND TRACTION

The Gamskette G provides the ideal connection between the vehicle and the snow. The closed aluminum profile ensures a perfect balance between weight and stability while preventing ice buildup. This design provides operators exceptional climbing capability and traction, allowing them to navigate steep slopes and all types of snow conditions safely. The steel teeth, affixed in an arched shape along the length of the crosslink, deliver excellent side-hill grip and stable handling. The radial shape of the ice spikes enhances maneuverability while maintaining traction in tight turns, improving the overall driving experience.

MAXIMIZE YOUR TIME ON THE SNOW

Maintenance is crucial for every grooming operation, and with the Gamskette G, it's also straightforward. The clamping lock and the crosslinks with pre-installed studs make belt replacement easy, minimizing downtime and maximizing your time on the snow.

COMPATIBLE VEHICLES

BISON

(GENERATION BO, BS)

TECHNICAL DATA

Vehicle width 4.2	4.220 mm 13'10"
Weight of one track	960 kg 2,116 lb
Width of one track	1.680 mm 5'6"
Distance between tracks	860 mm 2'10"
Height of tracks	138 mm 6"
Pitch	127 mm 5"
Number of crosslinks	64
